Education

University of York Expected June 2028
B.Eng. in Electronic and Computer Engineering
- Grade: 89.67% Overall (1st Year)

University of York International Pathway College Jan 2025 – Aug 2025
Foundation Certificate in Computer Science and Engineering
- Modules: Advanced Mathematics, Electronics, Robotics
- Grade: 95% Overall

Experience

Software Developer Intern – Zetron UK Aug 2026 – Oct 2026
- Developed a Windows application automation framework using FlaUI, C#, and .NET
- Built a custom logging service with configurable log levels before migrating to Serilog
- Applied SOLID principles through code reviews and pair-programming with senior engineers
- Shadowed test engineering of train radio systems, gaining exposure to multiple forms of testing

Full-Stack Software Developer – York Community Consulting Mar 2026 – Present
- Develop and maintain YCC's website, implementing new features to support project delivery
- Implemented RESTful APIs to serve application data, integrating Redis caching to reduce latency
- Refactored fragmented search filters into a unified TypeScript component, reducing UI clutter and improving the application review process
- Researched and implemented a Firebase backup strategy to protect against data loss
- Reviewed pull requests and carried out QA tests to maintain code quality and consistency

Electronics and Chassis Team Member – York Formula Student Sept 2025 – Present
- Supported the development of an electric race car for YFS's Formula Student UK debut, creating CAD models in Autodesk Fusion and assisting with vehicle assembly

IEUK Technology and Engineering Intern – Bright Network June 2025
- Analysed web traffic logs using Python, accurately identifying suspicious activity patterns and recommending effective bot control strategies in a technical report
- Gained exposure to the tech and engineering industry through presentations and Q&A sessions

Projects

Model to Market: Hybrid Trading Hackathon | Python, Claude Agents June 2026
- Emerged as a finalist in a two-week hackathon to develop trading strategies using agentic AI
- Built a mean-reversion trading strategy using resources such as Claude Agents and Pydantic, performing backtests using Pandas and NumPy, and deploying with MetaTrader5 API

Arvid: Game and Handheld Console | C++, TypeScript, HTML, CSS, STM32 Feb 2026 – June 2026
- Collaborated with 5 students to develop a game console and 2D game from scratch using C++
- Programmed game logic using an ECS design pattern enabling quick prototyping
- Aided design of custom PCB, reviewed console prototypes, and soldered components
- Built a promotional website using Next.js, TypeScript, and Tailwind CSS based on Figma designs

Skills

Languages: C, C++, C#, Python, JavaScript, TypeScript, HTML, CSS, VHDL
Technologies: Git, React, Next.js, Tailwind CSS, Firebase, Redis, Pandas, NumPy, .NET
Software: Autodesk Fusion, Figma, MS Excel, MS Word, MATLAB, Xilinx Vivado, KiCAD
